BCN Files and Instructions-June 2023

This document goes into great detail with screenshots on how to install a BCN map. Basically all you have to do is download the map file and copy/move it to the "data" folder in the BCN folder on your Tablet. It has instructions for using a PC or using your Tablet only. It has sections for Android 10 and earlier, and for Android 11 or later. At the bottom there are some tips on how to use BCN and some settings suggestions.

BCN "GoTo" and Orux "DirectTo" Functions Instructions-June 2023

These show you how to draw a straight line from your current position to somewhere else on the map. It does not give you turn by turn directions, rather you choose which trails you want to take along the line. This is very useful.

How to Record, Disable, Delete, and Copy a Track in BCN

Goes into detail on how to name tracks you make, how to turn them off and on, how to delete them and most importantly how to copy them to a new map you updated.

Guide to Importing GPX files into Orux-June 2023

Shows how to display a GPX/KML track file on top of my Orux map. It shows you how to display the track in different formats that make it stand out. This is one function that makes Orux outshine all other Apps.

Making a Multimap for Orux ver 3

This shows how to make a background map behind my map. Most people like to use Orux with the default white background. BCN is easier to make a background map and it has many to choose from.
